Latest news about the prunes of Land Growers Chile

General considerations

Land Growers Chile is glad to announce the fact that also this year we are able to sell dehydrated prunes. We offer both pitted and unpitted prunes with a variety of sizes and way of production.

We offer high quality at a competitive price to our buyers due the large volumes we can ask from our Growers.

Crop 2016

The crop of 2016 is smaller than expected, due to the rain. Mainly the bigger sizes are hard to find. Luckily we have them in stock and are we able to sell the calibre 30/40 and up.

Californian market

According to a report of California Department of Food and Agriculture from June 2016 California produced 45 tons, which is a decrease of 58% compared to last year. This is caused by the effects of low temperatures, high winds and heavy rains.

The situation in California has led to an increase of Chilean export. Compared to last year, Chile exported 35,6% more according to Odepa.

Market prices

Not only Chile had to deal with bad weather but also Argentina has faced losses due to hail. Besides the low stock of prunes of the caliber 30/40 and bigger, the demand for smaller prunes has increased. All these factors are driving the price of prunes up.
