Latest news about the raisins of Land Growers Chile

General considerations

Land Growers Chile is glad to announce the fact that also this year we are able to sell raisins. We export Flame, Thompson, Black, Crimson y Golden raisins. With exception of Crimson, which is only available in size Medium the other raisins are available in sizes Medium and Jumbo.

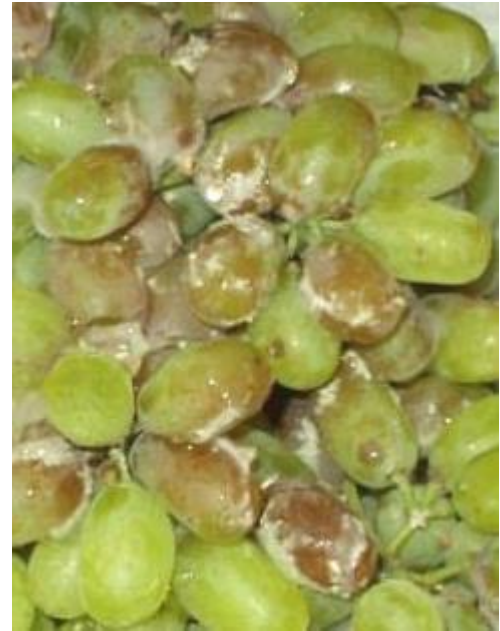

We offer high quality at a competitive price to our buyers due the large volumes we can ask from our Growers.

Crop 2016

Like all other growers in Chile, we experienced heavy rainfalls, which affected the crop of 2016. Not only the rainfall affected the crop but also the high level of humidity and low temperatures. All these climate effects affected the crop negatively.

Black and Golden raisins

Since black and golden are harvested later compared to the other varieties especially these two suffered loses. Normally the harvesting of grapes ends mid-April but due to the previous mentioned climate effects, the harvesting had been postponed by 10 to 15 days because the grapes weren't ripe yet. This delay caused rotten products because of the rain.

Example of affected Thompson grapes

Loses to the crop, additional costs to dry grapes and high demand for Chilean raisins are causing a market that fluctuates heavily, changing prices day by day.

Currently our Growers are investigating the amount of raisins of high quality that is available. We expect to have a complete overview of the quantities by the end of this month.
