Latest news about the walnuts of Land Growers Chile

General considerations

Land Growers Chile is glad to announce the fact that also this year we are able to export high quality walnuts. We offer both Chandler and Serr, hand cracked and machine cracked. The calibres available are 30+, 32+ and 34+. Besides in shelled walnuts, we offer also various sizes: half and quarters in the colours light and extra light.

From July also light Amber will be available for export.

Experienced Growers harvest all our walnuts manually. We offer high quality at a competitive price due to the large volume we can ask from our Growers and sell to our clients.

Crop 2016

Like all other growers in Chile, we experienced heavy rainfalls, which affected the crop of 2016. The rain has affected mainly the Chandler range, Serr was affected in less quantity due to the fact they harvest earlier (March-begin April). This means that in general the market price is higher than expected due to losses of the crop.

Affected vs. Non-affected

Even though a part of the crop in Chile has been affected, the majority of our walnuts are of high quality, which our clients are used to receiving from us and also providing large volumes will not be a problem. Since we took measures to prevent more harm to the crop, we were able to maintain this quality.
